Experience

Senior Software Developer, Cigna

Nov 2022 – April 2026

- Designed and built the frontend dashboard for a secure enterprise web application to analyze and display financial and statistical analysis using Angular and RxJS, authenticated with OAuth2.0.
- Refactored an existing application to significantly increase performance and code maintainability (approximately 90% speed improvement, reducing load times from 50 seconds to 5 seconds).
- Integrated RESTful APIs with frontend applications and collaborated closely with backend teams to ensure seamless data exchange.
- Developed a visualization library based on FusionCharts to display complex live-updating data.
- Refactored legacy components into reusable Angular modules, improving application performance, maintainability, and code reusability.
- Built and maintained an internal enterprise-level Angular application.

Lead Angular Engineer, NowRX

June 2021 – Sept 2022

- Developed and maintained three sophisticated enterprise-level production applications supporting tens of thousands of customers.
- Led the design and development of enterprise pharmacy management applications using Angular and Electron for cross-platform desktop deployment.

- Built a cross-platform Electron application with tight integration into the operating system.
- Found and released critical same-day bug fixes and application updates.
- Led the Angular team, including task planning, prioritization, and assignment.
- Performed code reviews.
- Mentored junior developers, conducted code reviews, and established frontend development best practices across the team.

Lead Frontend Engineer, Covax Data

Mar 2020 – June 2021

- Led frontend development activities, coordinated sprint deliverables, and ensured adherence to coding standards.
- Built three front-end Angular applications from the ground up, including an Electron application with deep OS integration.
- Developed release processes using Azure DevOps and Docker.
- Led the frontend team, including planning, prioritization, and assignment of work.
- Built enterprise web applications from the ground up using Angular, TypeScript, and modern frontend development practices.
- Performed code reviews.
- Discovered and fixed bugs.
- Support development of automated tests

Web Application Engineer, Verisk

Feb 2016 – Feb 2020

- Developed 360-value.com, an industry-leading, multi-million-dollar application using Angular and Java Spring.
- Built an AWS serverless application.
- Migrated a live enterprise site from AngularJS to Angular.
- Wrote automated testing and regression frameworks using Selenium WebDriver and Cucumber.

- Developed automated UI test scripts using Selenium WebDriver and Cucumber, improving test coverage and application reliability.

Web Developer, Brigham Young University

May 2014 – Dec 2016

- Built a custom web application from the ground up using JavaScript, PHP, and MySQL.
- Maintained and enhanced the application according to client requirements.
- Maintained project documentation and supported ongoing application enhancements and production deployments.

Skills

Angular, AngularJS, TypeScript, JavaScript, RxJS, Node.js, Electron, Java, Spring MVC, Spring Data, JPA, Maven, Oracle, PostgreSQL, MongoDB, DynamoDB, MySQL, AWS Lambda, Amazon S3, AWS Lightsail, Docker, Jenkins, Concourse, Azure DevOps, FusionCharts, Selenium WebDriver, Cucumber, Jasmine, Protractor, HTML5, CSS3, CI/CD, Agile/Scrum, Git

Education

Bachelor of Computer Science
Brigham Young University, Utah
GPA: 3.7

Built an operating system in C, including virtual memory, disk management, and multithreading support.

Built a functional online multiplayer game.

Completed a broad range of software engineering and computer science projects.
